Sylhet

Summary

Hardware Design Specialist with expertise in multi-layer PCB design and robotics. Experienced in bridging complex hardware systems with intelligent software using Altium Designer and STM32 architectures. Founder of Syzilo, focusing on delivering engineered tech solutions through leadership and innovation.

Core Technical Skills

- PCB Design: Altium , KiCad ,Expedition PCB, Proteus, EasyEDA
- Hardware Design: Discrete IC integration
- Robotics & Control: PID Control Logic, Robotics
- Technical Simulation: MATLAB , Simulink and LTSpice

General Skills

- Industrial Automation: PLC, VFD, and HMI
- Electrical Drafting: AutoCAD Electrical and 2D/3D
- Programming Languages: Python , C++ , C
- General Productivity: Adobe Illustrator , Microsoft Excel and PowerPoint
- Business & Management: Entrepreneurship (As founder of Syzilo), Customer Service , Sales Management and CRM

Featured Projects

Linux-Powered MPU Board:
Designed a high-density **10-layer PCB** for STM32MP157, optimizing high-speed signal integrity for industrial Linux applications.

Earthquake Mitigation System:
Developed an AI-driven seismic detection system using **ESP32-C3** and **TinyML** to enable real-time hazard mitigation.

Autonomous Line Follower Robot:
Engineered a high-speed LFR with **PID control logic** and custom motor drivers for precise autonomous navigation.

Smart Gas Leakage Detection and Automatic Shut-off System:
Built an IoT-based safety system featuring **MQ-2 sensors** and an automatic servo-controlled shut-off mechanism.
